Definitions

Dividend: The number being divided in a division problem.
Divisor: The number the dividend is being divided by.
Quotient: The resulting number when dividing.

For example: In $6 \div 3 = 2$, the dividend is 6, the divisor is 3, and the quotient is 2.

Instructions

Find the unknown dividend.

Example

Problem: $? \div 4 = 6$

To find the unknown dividend, we multiply the divisor by the quotient.

$$? = 4 \times 6$$
$$? = 24$$
