Name:_____ Date:_____

Definitions

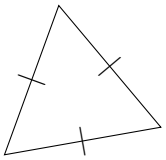
Equilateral triangle: A triangle with all 3 sides equal in length.
Isosceles triangle: A triangle with exactly 2 sides equal in length.
Scalene triangle: A triangle with no sides equal in length.

Instructions

Identify each triangle as equilateral, isosceles, or scalene. The marks on the sides show which sides are equal in length.

Example

Problem: What type of triangle is shown?



The marks indicate that each side of the three sides are equal to each other.
Answer: Equilateral triangle
