

Lesson 3.2 Solving Ratios

A proportion can be used in problem solving.

The ratio of apples to oranges is 4 to 5. There are 20 oranges in the basket. How many apples are there?

$$\frac{4}{5} = \frac{n}{20} \quad \text{Set up a proportion, using } n \text{ for the missing number.}$$

$$4 \times 20 = 5 \times n \quad \text{Cross-multiply.}$$

$$\frac{80}{5} = n \quad \text{Solve for } n.$$

$$16 = n \quad \text{There are 16 apples.}$$

Solve.
